ERC Researchers Edit Book on the Utilization of Technology in Multicultural Settings

ERC researchers Anna Boriack, Jacqueline Stillisano, and Hersh Waxman, along with Tirupalavanam Ganesh of Arizona State University and Trina Davis of Texas A&M University, are editors of the third volume in the Research in Educational Diversity and Excellence series recently released by Information Age Publishing.

The purpose of the Research in Educational Diversity and Excellence series is to bring attention to issues facing linguistic and culturally diverse students and those placed at risk of academic failure due to race, socioeconomic level, or geography. The present volume, *Research on Technology Use in Multicultural Settings*, focuses on the use of educational technology in multicultural settings and explores the challenges and possibilities related to appropriate technology implementation in diverse educational settings.

The book’s 12 chapters address theoretical factors at play in today’s increasingly technological learning environments and provide an examination of the outcomes and challenges related to technological tools and models in use in projects involving low-income and language minority families and students.
